Web Forum Threat Intelligence
Scraper & Analyzer

ThreatLens

Problem & SOLUTION

Problem

- Credential leaks and planned cyber-attacks on Indian infrastructure often appear in public web chatter.
- Manual monitoring is slow, unscalable, and ineffective against noisy high-volume data.
- Critical early-warning signals are missed.

Solution

- Python-based automated monitoring of web forums/sources.
- Detection of leaked credentials + attack intent analysis.
- Threat scoring (LOW/MED/HIGH/CRITICAL).
- Real-time alerts, dashboard insights, and structured reports.

Flow of Solution

A Python-based automated system continuously monitors selected web sources, detects leaked credentials, identifies attack-intent discussions targeting Indian infrastructure, assigns threat severity, and generates real-time alerts plus structured reports.

TECH STACK & APPROACH

- Python
- APScheduler
- HTML
- CSS
- Javascript
- SQLite

UNIQUENESS & INNOVATION FACTOR

Continuous Monitoring

APScheduler-driven periodic crawling and ingestion.

Detection Intelligence

Regex + keyword + spaCy intent analysis for threat signals.

Actionable Output

LOW/MED/HIGH/CRITICAL scoring, dashboard alerts, and PDF reports.

System Architecture

Forums/Pastebin/Reddit -> Scraper Engine -> Detection
Module -> NLP Analyzer -> Threat Scoring Engine ->
Database -> Dashboard + Alerts + Reports

MVP- Minimum Viable Product

For our MVP, we implemented:

- Automated monitoring of selected sources
- Credential leak detection using regex and entropy checks
- A threat scoring engine that classifies risks by confidence, severity, and urgency
- A real-time dashboard that generates structured alerts and tracks historical trends

Threat Scoring Model

- Credential Found +40, Indian Infra Keyword +30
- Attack Planning Language +20
- Risky Source +10. Total 0-100: LOW (0-25)
- MEDIUM (26-50), HIGH (51-75)
- CRITICAL (76-100).

Target Sectors Monitored

- Banking & Finance (RBI/NPCI/UPI)
- Government (UIDAI)
- Transport (IRCTC/Railways)
- Energy (NTPC/Power Grid)
- Defense & Space (ISRO), Telecom (BSNL/Airtel).

Future Scope

- Dark web monitoring via Tor
- ML-based classifier
- SIEM integration (Splunk/ELK)
- Mobile alerts
- Multilingual NLP support (Hindi + regional languages).

Thank You

Detecting Threats Before They Strike
